Welcome

On behalf of the Management Committee, it is our great pleasure to welcome you to Singapore for the IEEE International Magnetics Conference in Asia, INTERMAG 2018.

INTERMAG is the premier Conference on all aspects of applied magnetism. It has the tradition of bringing international researchers together, to discuss the latest developments in magnetism. With the aim of keeping that tradition and high standard, we have arranged the Conference program with a range of oral and poster presentations, invited talks and symposia, a tutorial session, two special evening sessions and exhibits. The presentation topics range from fundamental science to applied magnetism, including advances in magnetic recording, spintronics, energy and power technologies, bio-magnetism, and the emerging fields of Internet-of-Things and smart living. All members of the international scientific community interested in new developments in magnetism and associated technologies are invited to attend INTERMAG 2018.

Singapore is located at the tip of the Malay Peninsula. Singapore's tropical climate welcomes both leisure and business travelers all year round. The island republic's excellent infrastructure enables visitors to enjoy its many sites and attractions in a safe, clean and green environment. This tiny island-state is also remarkbly culturally diverse. Visitors can taste the foods of Chinatown or Little India, visit a historic mosque on Arab Street, stroll or cruise along the Singapore River, and enjoy the wildlife of the Singapore Zoo Night Safari or the Jurong Bird Park. Finish it off with fireworks and a beautiful view of the city from the Marina Bay Sands Hotel. We hope you will have the opportunity to explore Singapore during the Conference.

On behalf of the Management Committee of INTERMAG 2018, we wish all INTERMAG 2018 participants a fruitful and enjoyable stay in Singapore.

SPINTRONICS NANODEVICES

Professor Hideo Ohno
Tohoku University, Sendai, Japan

Abstract:
Development of spintronics nonvolatile nanodevices and their integration with CMOS circuits are critical to realize standby power free, low-power consumption, yet high performance integrated circuits for Internet-of-Things (IoT), high performance computing and artificial intelligence. Endurance and low supply-voltage operation make these spintronics device capable of being used in the place of current volatile working memories such as DRAM and SRAM and beyond. The magnetic tunnel junction (MTJ), a two-terminal nonvolatile spintronic device that can scale down to 20 nm with the perpendicular-easy-axis CoFeB-MgO system, is the device most widely employed for such a purpose. I will review the development of MTJs, and discuss about its ultimate scalability below 10 nm by showing MTJs with current induced switching and high thermal stability in the range of 4-8 nm. I will then describe the work on three-terminal devices that separate the write current path from the read current path. Here I focus on devices that utilize spin-orbit torque arising from structures involving heavy metals as well as from antiferromagnets; the latter is shown to operate as analog memory suitable for neuromorphic applications.

Biography:
Professor Hideo Ohno, is an internationally renowned physicist, recognized for his extensive work on spintronic devices. He currently serves as the director of the Research Institute of Electrical Communication and a vice president of Tohoku University. Professor Ohno has been selected to serve as president of Tohoku University starting in April 2018.

Appointed as professor at Tohoku University in 1994, Ohno holds B.S., M.S. and Ph.D. degrees from the University of Tokyo. He spent time as a graduate student at Cornell University in 1979 and was a visiting scientist at IBM T. J. Watson Research Center from 1988 to 1990. From 1982 to 1994 he was appointed as lecturer and then associate professor at Hokkaido University.

Professor Ohno has received the IBM Japan Science Award (1998), the IUPAP Magnetism Prize (2003), Japan Academy Prize (2005), Presidential Prize for Research Excellence,
Tohoku University (2005), Agilent Technologies Europhysics Prize (2005), Thomson Reuters Citation Laureate (2011), JSAP Outstanding Achievement Award (2012), and the IEEE David Sarnoff Award (2012). He was a distinguished lecturer for the IEEE Magnetics Society in 2009 and has recently been elevated to Fellow of the IEEE “for contributions to materials and device design for spintronics.”

Wireless Access

Wireless access will be available in the Conference area including the Poster/Exhibit Hall. An access code and relevant instructions will be posted onsite. The speed of connection serves basic purposes, such as emailing, and may be limited due to the high number of expected attendees.

Speakers Practice Room

Speakers may use the Speaker Practice Room to practice their presentation and test their computer connections with the in-house equipment prior to their individual presentations. Audiovisual equipment (LCD projector and screen) will be available for speakers to use from Monday through Friday. Speakers are encouraged to use this facility to practice their presentation, either alone or with colleagues.

Oral Sessions

All oral sessions will be held on Level 4 of the Sands Expo & Convention Center from 9:00 am to 12:00 pm in the morning and 2:00 pm to 5:00 pm in the afternoon on Tuesday through Friday (except Wednesday, when the abbreviated afternoon session will run from 2:00 pm – 4:00 pm) The detailed order and locations of talks are listed in this program book, also accessible via the Conference web and mobile apps.

Contributed oral presentations are 15 minutes per speaker (including 3 minutes for questions), while invited presentations are 30 minutes per speaker (including 5 minutes for questions).

All oral presentations are to be made using the speaker’s own laptop. The Conference will provide the LCD projector and screen, laser pointer, and microphone in each oral session room. The display aspect ratio is 4:3 (not widescreen). There will also be a multi-port switchbox in each session room so that speakers can connect their laptops during the question period of the previous speaker.

Only standard PC-style VGA connections to the LCD projector will be supplied (not HDMI). Presenting authors must supply any adaptor required for their computer. In particular, Mac OS users must make sure that they have the correct adaptor plug.

Presenters are encouraged to test their connections and display settings in the Speaker Practice Room (see venue map) prior to their presentations.
Speakers should check in with the Session Chair at least five minutes before the scheduled start of the session. Session Chairs have the responsibility of reporting "No-Show" to the Publication Committee. Papers associated with no-show presentations will not be published in the special INTERMAG issue of the IEEE Transactions on Magnetics.

**IEEE Magnetics Society Best Student Presentation Award**

Following the establishment of this prestigious prize by the IEEE Magnetics Society in 2008, the selection of the six finalists for INTERMAG 2018 has been made after full review of all students entering the competition. This selection has been based on the quality and likely impact of the work, with preference given to students who are within one year of graduation and who are, and whose advisors are, current members of the IEEE Magnetics Society. The six finalists will receive a cash award from the Magnetics Society as well as recognition for their achievement. The eventual winner will be selected by a transnational panel of scientists who will assess each presentation according to the following criteria:

1. The quality/impact of the work
2. The student’s contribution/involvement in the work
3. The quality of student’s presentation

Each of the criteria will make an equal contribution to the assessment. The panel evaluation process will be overseen by the Chair of the IEEE Magnetics Society Education Committee and the Chair of the Honors and Awards Committee. The award will be made to the student achieving the highest overall ranking in the three criteria.

The six finalists of INTERMAG 2018 are:

- **Jérémy Létang**
  AE-01 (Tuesday, 09:00, Roselle II)

- **Hiroki Taniguchi**
  AD-03 (Tuesday, 09:30, Peony IV)

- **Mohammad Zahedinejad**
  AI-11 (Tuesday, 11:45, Orchid II)

- **Mario Fratzl**
  BC-01 (Tuesday, 14:00, Orchid IV)

- **Dédalo Sanz-Hernández**
  BF-05 (Tuesday, 15:00, Peony I)

- **Xueying Zhang**
  CD-03 (Wednesday, 09:30, Peony IV)
Poster Sessions

All poster sessions will be held in the Simpor/Roselle Ballroom on Level 4 of the Sands Expo & Convention Center. Posters will be displayed from 8:30 am - 11:30 am for morning sessions, and 1:30 pm - 4:30 pm for afternoon sessions. Posters should be set up at least 15 minutes before the session starts and must be removed by the authors promptly at the end of their session. Posters not removed will be discarded.

The maximum poster size is 0.85 meters wide by 1.2 meters high (33 inches wide by 46 inches high). You must include the title and authors on the poster. The Conference provides a small sign designating the paper to be posted on each board and adhesive strips for attaching your poster to the board.

Poster presentations will consist of well-prepared visual materials about the work posted on a designated board. An author of the digest must be available to present details and answer questions during the selected poster session times. If a poster is posted but none of the authors is present, the Session Chairs will count the presentation as a “No-Show”. Papers associated with no-show presentations will not be published in the special INTERMAG issue of the IEEE Transactions on Magnetics.

Best Poster Awards

Best Poster Awards will be given to recognize excellence in research and presentation. There will be one award made for each morning and afternoon session of the Conference. The awards will be made in the last hour of each poster session. The award consists of a SGD 100 cash prize and an award certificate. A ribbon will also be attached to the winning posters. Winning posters will be prominently displayed throughout the remainder of the Conference.

All posters will be eligible for nomination for this award provided that they meet the requirements and guidelines for poster presentations. Selections will be based on the level of the research, quality of the poster, and clarity of the presentation.

Nominations will be made by the individual Session Chairs. The final decision will be made by the Poster Award Committee after reviewing the nominated posters.
Student Travel Grants

The IEEE Magnetics Society awards travel grants of up to $1000 each to a limited number of students wishing to attend INTERMAG 2018. These grants are intended to partially offset travel costs. Support is for current graduate students only. Post-doctoral workers and undergraduate students are ineligible. Students who have previously received travel support from the Magnetics Society are also ineligible.

Preference is given to student members of the Magnetics Society. Preference is also given to students nearing completion of their studies and presenting conference papers. The student’s supervisor must also be a member of the Magnetics Society. The student’s supervisor must write a letter of endorsement for the applicant. A second letter of endorsement from a full member of the Magnetics Society is also required.

Travel grants are a reimbursement for actual expenses. Thus, the students must attend the Conference and submit receipts to the Student Travel Coordinator, which then are processed and reimbursed by IEEE. Reimbursement will be made at the Conference.

Shortly after the Conference, grant recipients must submit a short account of their experience for possible inclusion in the IEEE Magnetics Society newsletter.

Conference Local Support
INTERMAG 2018 is being held in Singapore for the first time and we would like to thank various organizations and people for their help in making this happen. INTERMAG 2018 has greatly benefited from the financial support of Singapore Exhibitions and Conventions Beruau (SECB) and Nanyang Technological University (NTU), Singapore. IEEE Magnetics Singapore Chapter has been helpful right from the beginning. We would like to particularly thank several students who submitted an entry for the logo design competition. The winners, Tanmay Dutta and Yu Jiawei, were helpful even at the later stages in the design of cover page for program book. The experience and support of local Conference organizers, Meeting Matters International has been very useful.

This special evening session features three executives from leading hard disk drive and memory companies discussing the state of the art and future directions of data storage and magnetic memory technology. Each will present their vision and roadmap of technology development. What revolutionary approaches will extend the dominance of the hard disk in mass data storage? How and when will magnetic random access memory (MRAM) become competitive? What breakthroughs are still anticipated to keep these technologies growing at historic trends? In particular, there will be description of recent demonstrations of hard disk drives with Heat Assisted Magnetic Recording (HAMR) and Microwave Assisted Magnetic Recording (MAMR). The current status of Spin Transfer Torque (STT) MRAM will also be presented along with discussions on the embedding of MRAM into contemporary CMOS circuits. Following the presentations of the panelists, there will be an extended period for questions from the audience and further discussion.
